Intelligent Dairy Solutions
IDS i-QUBE

IDS i-QUBE, part of the IDS product portfolio, is a sensor worn on the rear leg that reliably and accurately monitors individual cow activity including health, welfare and mobility. Sensors regularly collect activity data, which is analysed by our intelligent algorithms to provide accurate alerts and information to the farmer.

Movement sensors, IDS i-QUBE, record each cows movement multiple times per second, continuously recording data to provide accurate insights through our user-friendly dashboard. The system turns sensor data into real-time relevant alerts and information to help manage milking herds.

Why the IDS i-QUBE?

- Early signs of Oestrus detection
- Notifying the optimum insemination window
- Lying time
- Overall mobility monitoring & scores
- Easy to attach
- Durable and comfortable straps
- Waterproof
- Uses 3 axis accelerometer technology
